GROUNDWATER RESILIENCE: HOW DO WE GET THERE?

February 19, 2026 6:30 PM to 8:00 PM

Join us to learn the facts and about actions New Mexico must take to increase the resilience of New Mexico's heavily used groundwater from Santa Fe native Gretel Follingstad, Ph.D., senior manager of climate resilient water systems for the Environmental Defense Fund. She is the principal author, with nine co-authors, of the New Mexico Groundwater Alliance's excellent 2026 New Mexico 360 Groundwater Report. The report shows us where we are and what we need to do to build groundwater resilience and longevity.

"By taking a deeper dive into New Mexico's groundwater history and current challenges this report elevates the increasing urgency of groundwater declines in various areas of New Mexico. ... The New Mexico 360 Groundwater Report is intended to elevate and educate New Mexicans about the urgency of statewide groundwater declines and serve as a call to action for proactive management to avoid a looming groundwater crisis."
